VOICE

Getting your message across...

Discovery Voice comprises of an Open Area Voice Sounder and Sounder Beacon that has been designed to provide clear instructional messages within the fire system.*

With the pressure of modern lifestyles, Discovery Voice can be used in applications to ease confusion for the public, instructing them in a concise and intelligible manner on what emergency action should be taken. This can be very important in public buildings where the occupants are most likely to be unaware of the specific fire signals.

With low current, high volume and the enhanced capability of up to 15 tone/message pairs the use of Discovery Voice reduces the risk of audible alarms being ignored.

To enquire about product availability and custom voice messages contact your regional sales manager.

- Capable of up to 15 tone/message pairs
- Fully synchronised
- Available in red or white
- Built in isolator
- Independent control of sounder and beacon
- Isolator status information
- Set-up and testing of devices at point of installation
